Griko Nibras

Creating delightful web experiences using frontend technologies

Currently working as frontend developer at [Strangelove Ventures](#) and open source maintainer at [Koding Ninja](#).

Previously as co-founder at a stealth startup, core organizer at [SurabayaJS](#), open source maintainer at [Deno Land Indonesia](#) and [Frontend Indonesia](#), also part-time Macrodata Refiner at [Lumon Industries](#).

Inquiries via email at hello@griko.id or via Twitter at [@griko_nibras](#).

 Schedule Meeting

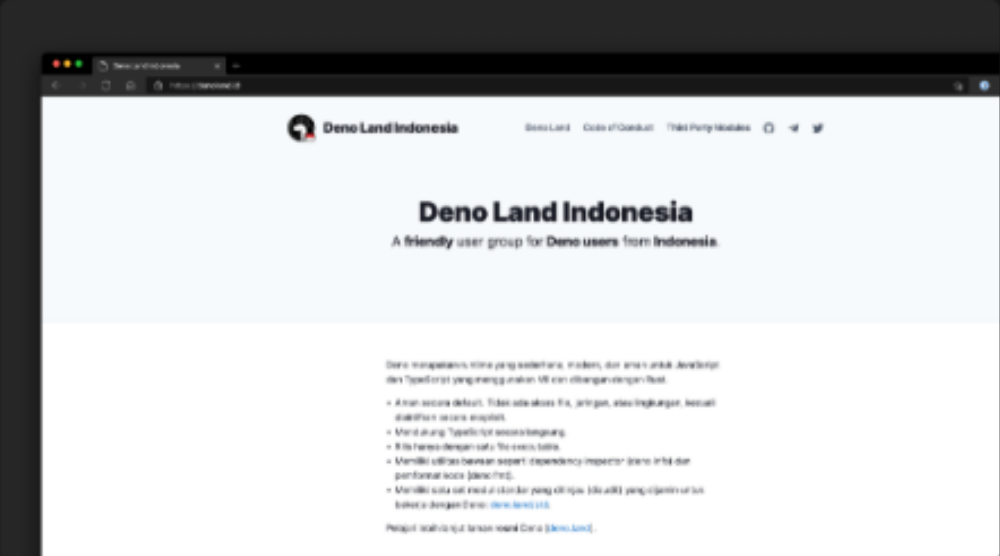

Recent projects

SurabayaJS

Authored and maintaining landing page for Surabaya JavaScript user group, made using Next.js and Chakra UI, hosted on Render.

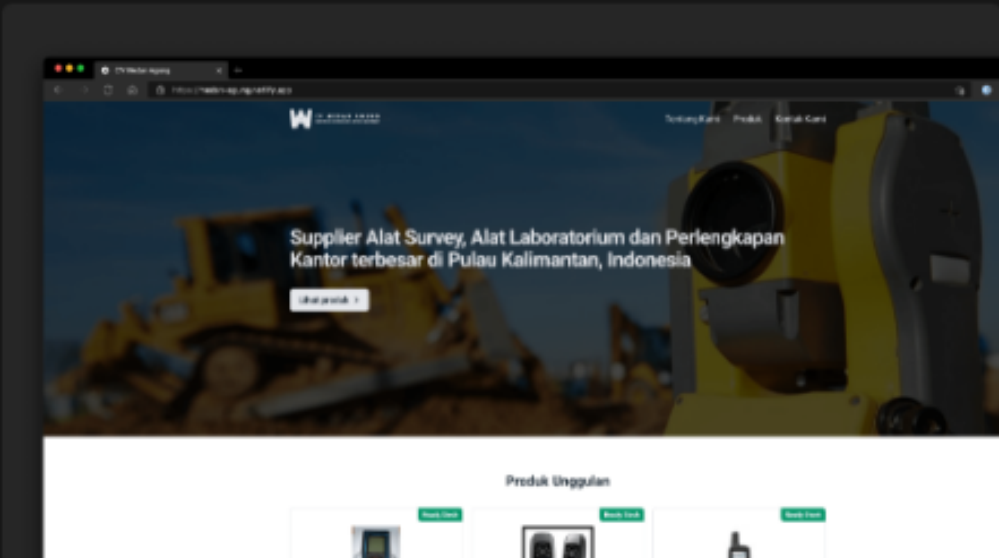

Visit website →

Deno Land Indonesia

Authored landing page made using Next.js and Chakra UI, and authored legacy Deno static package registry.

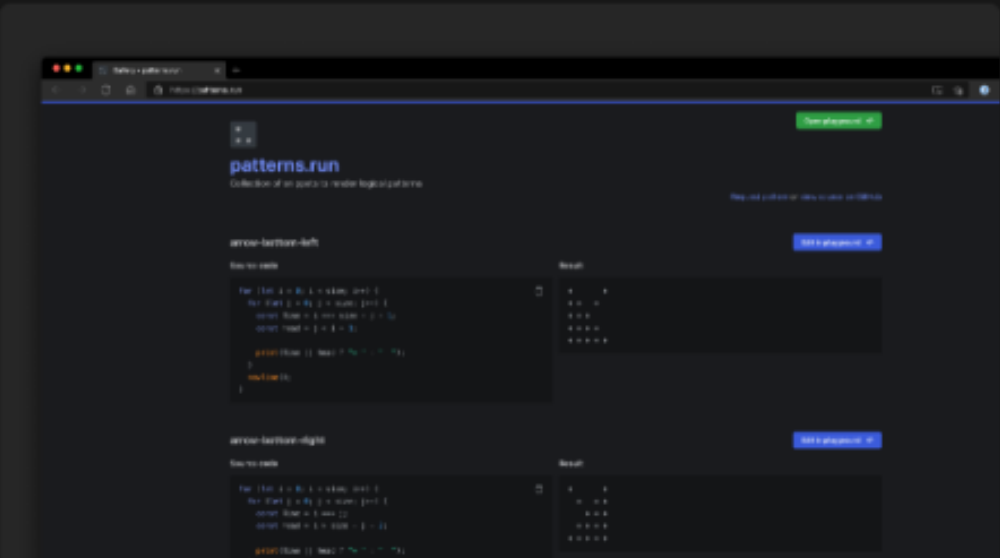

Visit website →

Medan Agung

Commissioned landing page for Medan Agung construction utilities store, made using Next.js, React Query, and Tailwind CSS, hosted on Netlify.

Visit website →

patterns-run

Collection of snippets to render logical patterns, made using Next.js and Mantine, hosted on Vercel.

Hi, my name is

Brittany Chiang.

I build things for the web.

I'm a software engineer specializing in building (and occasionally designing) exceptional digital experiences. Currently, I'm focused on building accessible, human-centered products at [Upstatement](#).

Check out my course!

01. About Me

Hello! My name is Brittany and I enjoy creating things that live on the internet. My interest in web development started back in 2012 when I decided to try editing custom Tumblr themes — turns out hacking together a custom reblog button taught me a lot about HTML & CSS!

Fast-forward to today, and I've had the privilege of working at an advertising agency, a start-up, a huge corporation, and a student-led design studio. My main focus these days is building accessible, inclusive products and digital experiences at [Upstatement](#) for a variety of clients.

I also recently [launched a course](#) that covers everything you need to build a web app with the Spotify API using Node & React.

Here are a few technologies I've been working with recently:

- JavaScript (ES6+)
- TypeScript
- React
- Eleventy
- Node.js
- WordPress

02. Where I've Worked

Upstatement	Engineer @ Upstatement
Scout	May 2018 – Present
Apple	Write modern, performant, maintainable code for a diverse array of client and internal projects
Scout	Work with a variety of different languages, platforms, frameworks, and content management systems such as JavaScript, TypeScript, Gatsby, React, Craft, WordPress, Prismic, and Netlify
Starry	
MullenLowe	Communicate with multi-disciplinary teams of engineers, designers, producers, and clients on a daily basis

03. Some Things I've Built

Featured Project

Halcyon Theme

A minimal, dark blue theme for VS Code, Sublime Text, Atom, iTerm, and more. Available on Visual Studio Marketplace, Package Control, Atom Package Manager, and npm.

VS Code Sublime Text Atom iTerm2 Hyper

Featured Project

Spotify Profile

A web app for visualizing personalized Spotify data. View your top artists, top tracks, recently played tracks, and detailed audio information about each track. Create and save new playlists of recommended tracks based on your existing playlists and more.

React Styled Components Express Spotify API Heroku

Featured Project

Build a Spotify Connected App

Having struggled with understanding how the Spotify OAuth flow works, I made the course I wish I could have had. Unlike tutorials that only cover a few concepts and leave you with half-baked GitHub repositories, this course covers everything from explaining the principles of REST APIs to implementing Spotify's OAuth flow and fetching API data in a React app. By the end of the course, you'll have an app deployed to the internet you can add to your portfolio.

React Express Spotify API Styled Components
